

Added value to your projects

Devecan's story:

The story begins in 2018, almost in parallel in Spain and Portugal. In Spain, Alcaliber, a regular client of the Madrid office, asks us to design and build a facility for drying Cannabis flower, and in Portugal an old acquaintance asks us to help him build a cultivation, drying and extraction facility of cannabis for RPK, currently Holigen.

From the start, we saw that these were not isolated opportunities and that the clients needed our help not only to design and build, but to apply for licenses, prepare business plans, set up their quality systems, protect the facilities from theft... and it became an all or nothing situation, we either helped them with everything or we were left out of the projects.

And from that market need, our commitment to undertake Devecan.com arose, as you can see on the website, which we invite you to visit, we present ourselves as follows:

- **We invite you to discover DEVECAN, a new project that was born as an integral solution for companies that seek to develop a medical cannabis project and its subsequent implementation, from technical and legal consulting, to the necessary facilities and care.**
- **DEVECAN is the perfect partner for companies interested in entering the medical cannabis sector.**
- **DEVECAN, The legal Cannabis experts**

With this initiative and in collaboration with the companies that you can see on the website, we have made or are developing applications for cultivation licenses, conceptual designs and construction of processing facilities in Portugal and Spain for more than 30 clients and we already generate volumes of production of more than €5 million per year.

We are also in the process of achieving projects in several Latin American countries such as Uruguay, Paraguay, Argentina, Colombia or Mexico, and we are beginning to see opportunities in countries of all sorts, from Switzerland to Rwanda. Soon, it will definitely be a global activity for our company.

It has become a large volume market and we are already a reference in it thanks to our experts in the field, Eudald Bogatel and Laura Taibo, and to the projects already executed in Portugal and Spain in which technicians such as João Marcos, Rut Morales, Rui Rodrigues or Juan Antonio Ramirez have been acquiring knowledge and experience that they will be delighted to share with all of you.
